

DbManager::DbManager

```
graph LR; A[DbManager::DbManager] --> B[DbManager::createTables]; B --> C[DbManager::countSnapshotRows];
```

The diagram illustrates a sequence of three database operations. It begins with the `DbManager::DbManager` constructor, which leads to the `DbManager::createTables` method. This method then leads to the `DbManager::countSnapshotRows` method. The final method, `DbManager::countSnapshotRows`, is highlighted with a gray background, indicating it is the current or final step in the sequence.

DbManager::createTables

DbManager::countSnapshotRows
